

Personal Journal App — SQLite Schema

17 tables, one database file (JOURNAL_DB) · served by two MCP servers (journal+eating at /mcp, trainer at /trainer/mcp) · generated 2026-08-13

People / CRMJournalIntakeTrainerSharedLegacy (dormant)

people		entities
id	PK	INTEGER
canonical_name		TEXT NOT NULL
role		TEXT
notes		TEXT
summary		TEXT
contact		TEXT (JSON)
email · phone · address		TEXT (legacy)
created_at		TEXT NOT NULL
summary = rolling profile; the only place relationships live		

aliases		surface forms
id	PK	INTEGER
person_id	FK	→ people
surface_form		TEXT NOT NULL
phonetic_key		TEXT (metaphone)
source		'manual' 'learned'
UNIQUE(person_id, surface_form) · learned aliases make it quieter over time		

groups	
id	PK
name	TEXT UNIQUE

person_groups		M:N
person_id	PK·FK	→ people
group_id	PK·FK	→ groups

settings		JSON KV
key	PK	TEXT
value		TEXT (JSON)
holds 'profile' (trainer) and 'eating_profile' (targets for the rings)		

entries		the journal
id	PK	INTEGER
body		TEXT (cleaned)
raw_body		TEXT (verbatim)
entry_date		YYYY-MM-DD (Pacific)
kind		'log' 'thought'
day_position		INTEGER (1=earliest)
created_at		TEXT (UTC)
one entry per topic · entry_date = day it's ABOUT, not day written		

mentions		one per reference
id	PK	INTEGER
entry_id	FK	→ entries (CASCADE)
surface_form		TEXT NOT NULL
context_snippet		TEXT
person_id	FK	→ people (NULL=pending)
status		'pending' 'resolved'
created_at		TEXT
the who's-talked-about-together graph is a self-join over this table		

entries_fts		FTS5 virtual
body		content='entries'
kept in sync by AFTER INSERT / UPDATE / DELETE triggers on entries		

intake_items		one row per thing consumed
id	PK	INTEGER
food_date		YYYY-MM-DD (Pacific)
position		INTEGER (order in day)
item		TEXT (NULL = bare tap)
calories		REAL (NULL = unestimated)
protein_g		REAL
carbs_g		REAL
fat_g		REAL
sodium_mg		REAL
fiber_g		REAL
standard_drinks		REAL (alcohol)
water_oz		REAL
note		TEXT
created_at		TEXT
food, alcohol & water share one shape · day totals are DERIVED (SUM...GROUP BY food_date), never stored		

nutrition		LEGACY — folded into intake_items
id	PK	INTEGER
food_date		TEXT UNIQUE
summary		TEXT ("·" -joined)
calories ... water_oz		REAL ×8 (stored day totals)
notes · created_at		TEXT
first shape of the intake log (one row per DAY) · kept, not dropped; nothing reads it		

drinks		LEGACY — alcohol is an intake item now
id	PK	INTEGER
drink_date		TEXT UNIQUE
standard_drinks		REAL (0 = confirmed sober)
kind		TEXT ("beer, wine")
notes · created_at		TEXT
migration source only · sole copy of the per-day drink kind		

body_weight		daily metric
id	PK	INTEGER
weigh_date		YYYY-MM-DD (Pacific)
weight_lbs		REAL NOT NULL
note · created_at		TEXT
not tied to a workout — latest reading on a day is "the" weight		

exercises		catalog · ~870 preloaded
id	PK	INTEGER
name		TEXT UNIQUE
slug		free-exercise-db id
category		strength cardio ...
force		push pull static
level		beginner...expert
mechanic		compound isolation
equipment		TEXT
technique_notes		TEXT
common_mistakes		TEXT
cautions		TEXT
video_link		TEXT
image_link / _end		rep start/finish frames
in_rotation		0 1 — programming pool
hearted		0 1 — favorites superset
archived		0 1 — soft delete
created_at		TEXT
rotation ≤ hearted ≤ library · catalog is CLOSED to the model — new rows only via the website		

exercise_muscles		M:N normalize
exercise_id	PK·FK	→ exercises (CASCADE)
muscle	PK	canonical lowercase
role		primary secondary tertiary
makes muscle recency a plain GROUP BY, not an LLM guess		

exercise_aliases		AKAs
exercise_id	PK·FK	→ exercises (CASCADE)
alias	PK	lowercased ("rdl", "bench")
aliases table's twin for the catalog · an AKA never creates a row		

workouts		sessions
id	PK	INTEGER
workout_date		YYYY-MM-DD (" = active plan)
focus		"Legs", "Cardio"...
feeling		TEXT
notes		TEXT
status		'active' 'done'
created_at		TEXT
a plan is UNDATED until finish_workout stamps the completion day		

sets		plan + log in one row
id	PK	INTEGER
workout_id	FK	→ workouts (CASCADE)
exercise_id	FK	→ exercises
set_index		1-based within exercise
weight_lbs · reps · rpe		actuals (NULL till done)
duration_seconds		cardio only
distance_miles		cardio only
target_weight_lbs		plan target
target_reps		plan target
target_rpe		1-10 → Easy/Med/Hard
status		pending done skipped
ex_position		exercise's slot in workout
note		TEXT
only 'done' sets count toward recency / history / PRs
